

Retrofit survey

Your questions answered

What is a retrofit survey ?

Before home energy efficiency improvements can be made to your home, we need to complete a Retrofit Assessment.

This is an in-depth assessment of a property, based on the following criteria:

- ✓ An occupancy assessment
- ✓ An energy assessment
- ✓ A condition assessment of the property

Why do I need a retrofit survey?

A retrofit survey is to check your home is adequately ventilated before any home energy efficiency improvements are made. This is in line with compliance requirements set out by PAS2035.

Who will complete my retrofit assessment?

A qualified retrofit assessor will complete the retrofit survey assessment.
